

BEE BLAST®

Wasp & Hornet Killer

BEE BLAST®

WASP & HORNET KILLER

This fast-acting, high-strength insecticide knocks down and kills wasps, hornets, ants and spiders on contact. Its dense, accurate spray reaches more than 7 meters, so you can keep your distance.

- ▲ Kills wasps, hornets, bees, insects on contact.
- ▲ Kills residual insects returning to treated nest.
- ▲ Dense, accurate spray reaches nests more than 7 meters above ground.
- ▲ High dielectric strength of over 40,000 volts.

The best time to spray the nest is in the early morning or early evening when air temperature is cooler, most insects are in the nest and little activity is observed around the nest opening. Spray only if the air is still. Stand at a safe distance from the nest, not directly under it. Hold container upright at arms length, point the actuator at the nest and spray into the opening of the nest first. Then spray the rest of the nest until it is saturated. Treated insects may fall out of the nest and die. Any insects returning to the nest after treatment will be killed. Wait 48 hours before removing the nest. Foliage of desirable plants that were contacted with spray should be hosed off.
