

# Technical Brief

## CRC® Disc Brake Quiet

CRC Disc Brake Quiet is used to reduce brake noise caused by vibrations from the brake pads contacting the rotor. For customer preference we offer Disc Brake Quiet in a squeeze bottle, an aerosol can and .5 oz packets.

Before applying to the backside of the brake pad (Figure 2), the brake pad should be cleaned to remove all contaminants including grease, oil, and brake dust. Do not apply Disc Brake Quiet to the friction side of the brake pad as it can damage the pads and rotor (Figure 1).
